

Sustainable Development

Exatec ATM recycles about 2000 ATMs per year. Each recycled ATM is managed through a **methodic dismantling procedure**, some parts being removed to be renewed for a second life. We use a **selective sorting** for the other parts before sending them to the dedicated authorized partners depending of the product's category :

- Plastics
- Metals
- Electronic components
- Power Supplies
- Cables
- Batteries
- Monitors
- Hard Disks, CD & DVD devices...

De-installation

1

Every year, **Exatec ATM recycles about 1 000 tons** of banking equipment, helping to **preserv our planet.** The **dismantling** is totally **internally made** by our **specialized team.**

Each pallet we prepare for scrapping is systematically **weighed** in order to exactly determine the global weight of each shipment.

Identification

Refurbishing

OR In order to prevent possible risks of radioactive emissions, which could come from safety equipment, particularly in case of grouping on a restricted zone, **Exatec ATM** has invested a portable **detector of radioactivity.** If many safes have a low level of radiation, none exceeded the authorized standards for the use, the transport or the manufacturing, on more than **20 000 ATMS treated** by **Exatec ATM** over years.
